Basic Principles in Core Oral and Maxillofacial Surgery

Innovation in Education

Alfred G. Becking, Nadeem Saeed, Oliver Scheunemann

We cordially invite you to our 8th modular course week on oral and cranio-maxillofacial surgery.

The Strasbourg Osteosynthesis Research Group (S.O.R.G.) was founded in 1989, and many surgeons and trainees have benefited from the expertise of S.O.R.G. and its workshops held all over the world.

The initial focus was to disseminate the osteosynthesis miniplate techniques pioneered by Prof. Champy. Over time S.O.R.G. has considerably expanded its range of activities to cover the entire therapeutic range of cranio-maxillofacial surgery, including traumatology, preprosthetic, orthognathic and reconstructive surgery to craniofacial surgery and deformities.

All these topics have been the focus of separate courses held over the years. In 2004, the group developed the concept of organizing a bi-annual course week during which up to 250 participants were given the opportunity to gain knowledge on a broad scope of cranio-maxillofacial surgery topics with courses in Madrid (Spain), Belek (Turkey) or Kos (Greece).

Having reviewed the course format and with the new high-class conference facilities in the outstanding teaching and educational center in Tuttlingen (Germany), the 2018 course “Basic Principles in Core Oral and Maxillofacial Surgery” features detailed overviews of the most commonly encountered areas of OMF surgery (traumatology, TMJ, orthognathic and preprosthetic surgery).

Let this high calibre scientific program and intensive discussions with colleagues and S.O.R.G. members capture your enthusiasm. The combination of theory and practical sessions allow for maximum benefit, especially for the younger trainees. We can guarantee you an excellent week, both scientifically and socially!

5th Day (Friday, April 27th, 2018)

09:00 - 14:00 **Interactive Case Discussions**

Clinical cases are often complex and are exceeding the scope of one single aspect. Decisions taken on one hand may have an important impact on neighboring fields and later patient care.

Furthermore various treatment solutions can lead to promising results, but also to complications.

The purpose of the day is to discuss complex cases with special focus on

- Trauma
- TMJ
- and Orthognathic Surgery

Participants are encouraged to bring their own documented case as a base for group discussion.

The program will be arranged by participants and/or the faculty.
